HK-D3;

Novel isolated anti-angiogenic polypeptide comprising sequence of human kiningen domain 3v (HK-D3v) or variant of native HK-D3, useful for inhibiting angiogenesis, endothelial cell proliferation or endothelial tube formation.

Disclosure; SEQ ID NO 2; 79pp; English.

The invention relates to an isolated anti-angiogenic polypeptide (I) comprising the sequence of human kininogen domain 3v (HK-D3v) (fully defined sequence (S1) of 127 amino acids as given in specification) or variant or derivative of native HK-D3 (fully defined sequence (S2) of 123 amino acids as given in specification), and has at least 20% of activity of native HK-D3 in inhibiting angiogenesis, endothelial cell

CC diagnostically or therapeutically labelled anti-angiogenic polypeptide (II) comprising (I) labelled with a diagnostic or therapeutic label, and CC (II) comprising (I) labelled with a diagnostic or therapeutic label, and CC with a detectable label and a carrier. Further disclosed is an affinity CC ligand (IX) useful for binding to or isolating an HK-D3-binding molecule CC or cells expressing the binding molecule, comprising (II) immobilized to a correction, cell invasion, cell proliferation or angiogenesis, or for cells expressing which involves contacting cells associated with CC inducing apoptosis which involves contacting cells associated with CC undesired cell migration, invasion, proliferation or angiogenesis with CC (I) is useful for treating neurodegenerative diseases e.g., CC (IX). The current sequence represents an N-terminal addition variant of HK-D3 designated HD-D3v(GS), that includes an additional GS at the N-terminal columns of the N-terminal additional CS at the N-terminal addition variant of terminal columns of the N-terminal additional CS at the N-terminal cS at the N-terminal additional CS at the N-terminal cS at the N-terminal additional CS at the N-terminal cS at the N-terminal additional CS at the N-terminal cS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     გვეგეგეგეგეგეგეგეგეგეგ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cc variant or derivative, a variant or derivative of native HK-D3 having a college of the polypeptide, variant or derivative has at least 20% of the activity of polypeptide, variant or derivative has at least 20% of the activity of cor endothelial tube formation in an in vitro or in vivo bioassay. (I) is cor angiogenesis, or for inducing apoptosis, which involves contacting cor angiogenesis with undesired cell migration, invasion, proliferation cells associated with undesired cell migration, invasion, proliferation composition associated with undesired cell migration, invasion, proliferation composition associated with undesired cell migration, invasion, proliferation composition associated with undesired cell migration, invasion, composition composition associated with undesired cell migration, invasion, composition composition associated with undesired cell migration, invasion, composition associated with undesired cell migration, invasion, composition associated with undesired cell migration, invasion, composition composition composition composition associated with undesired cell migration, invasion, providing to a composition or angiogenesis. (VI) or (VII) is useful for providing to a contact with the composition cell migration associated with undesired cell migration, invasion, and the composition composition cell migration, invasion, providing to a composition or angiogenesis. (VI) or (VII) is useful for providing to a cell migration composition cell migration composition cell migration composition cell migration cell migration cell migration cell migration composition cell migration cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ADM16602 standard; protein; 123 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (HK). The invention provides peptides (see AAY95405-24) that are analogues of certain sites in the HK domain 3, specifically Asn275-Ly8282, Cy8246-Cy8249, Leu331-Tyr338 and Tyr299-Ser314. The peptides, which native Cys residues may be replaced by Ala residues, inhibit endothelial cell proliferation and may also induce endothelial cell apoptosis. Compositions including the peptides are used in claimed methods for inhibiting angiogenesis, inhibiting endothelial cell proliferation, and inducing endothelial cell apoptosis. Cancer, rheumatoid arthritis, and ocular disorders characterized by undesired vascularization of the retina are treated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 123

cc variant or derivative of native HK-D3 (fully defined sequence (S2) of 123 cc amino acids as given in specification), and has at least 20% of activity of native HK-D3 in inhibiting angiogenesis, endothelial cell conformation. Also disclosed is a comprisit or therapeutically labelled anti-angiogenic polypeptide comprisiting (I) labelled with a diagnostic or therapeutic label, and composition (II) comprising (I) labelled with a diagnostic or therapeutic label, and composition (II) comprising (II) labelled with a diagnostic or therapeutic label, and composition (II) comprising (II) labelled composition (II) comprising (II) abelled with a detectable label and a carrier. Further disclosed is an affinity ligand (IX) useful for binding to or isolating an HK-D3-binding molecule concells expressing the binding molecule, comprising (I) immobilized to a solid support or carrier. (I) or (II) are useful for inhibiting cell migration, cell invasion, cell proliferation or anglogenesis, or for undesired cell migration, invasion, proliferation or anglogenesis with
Sequence 123 AA;

    (1) is useful for treating neurodegenerative diseases e.g.,
Alzheimer's disease, Parkinson's disease or amyotrophic lateral sclerosis
(ALS). The current sequence represents the native HK-D3 amino acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     comprising the sequence of human kininogen domain 3v defined sequence (S1) of 127 amino acids as given in variant or derivative of native HK-D3 (fully defined
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated anti-angiogenic comprising the sequence of human kininogen domain 3v
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1,

                                                                                                                      The invention relates to an isolated anti-antiangiogenic polypeptide (I) can be sequence of human kininogen domain 3 variant (HK-D3v) having a CC fully defined 127 amino acid sequence given in the specification, or its CC fully defined 123 amino acid sequence given in the specification, which CC fully defined 123 amino acid sequence given in the specification, which CC polypeptide, variant or derivative has at least 20% of the activity of CC polypeptide, in inhibiting angiogenesis, endothelial cell proliferation CC or endothelial tube formation in an in vitro or in vivo bioassay. (I) is CC or endothelial tube formation in an in vitro or involves contacting CC useful for inhibiting cell migration, cell invasion, cell proliferation CC cells associated with undesired cell migration, invasion, proliferation CC comprising (I) is useful for treating a subject having a disease or condition associated with undesired cell migration, invasion, condiferation or angiogenesis. (VI) or (VII) is useful for providing to a condition associated with undesired cell migration, invasion, cell; tissue or organ an angiogenesis-inhibitory amount of HK-D3, HK-D3v cell, tissue or organ an angiogenesis-inhibitory amount of HK-D3, HK-D3v corresponds to the native HK-D3 protein sequence.

The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypoptides may be used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine CC autoimmune/inflammatory disorder, developmental disorder, endocrine CC disorder, neurological disorders, gastrointestinal disorder, endithp cCC infections caused by virus, bacteria, fungi or parasite. The dithp cCC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide collymorphisms, as molecular weight markers, and for somatic or germline cCC gene therapy. The present sequence represents a dithp protein of the cCC invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ફ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁

224pp;

English

The present invention relates to novel human extracellular messenger proteins (EXMES-1 to-28; ABP70774-ABP70801) and their coding sequence (ACC42361-ACC42388). The proteins are useful for preparing a composit for diagnosing or treating a disease or condition associated with

sequences composition

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Homo sapiens
The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders,
                                                                                                                                                                                                                              New diagnostic and therapeutic polynucleotides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or in gene mapping.
                                                                                                                                                                                                                                                                                                                                                                 WPI; 2004-329368/30.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

The proteins are useful for preparing a composition for diagnosing or treating a disease or condition associated with decreased expression or overexpression of functional EXMES e.g. autoimmune/inflammatory disorders, diabetes, endocrine disorders or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              expression or overexpression of functional EXMES e.g. autoimmune disorders or cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be cused to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine autoimmune/inflammatory disorders, developmental disorders, or CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide CC polymorphisms, as molecular weight markers, and for somatic or germline CC invention. Note: The sequence represents a dithp protein of the CC invention. Note: The sequence data for this patent is not represented in CC the printed specification, but was obtained in electronic format directly crown of the control of the control of the control of the printed specification, but was obtained in electronic format directly crown.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The present invention relates to the isolation of human protein CC modification and maintenance molecules (PMAM), and the polymucleotide CC sequences encoding them. A total of 40 PMAM polypeptides (designated PMAM CC -1 to PMAM-40) are disclosed. The sequences of the invention are useful CC for diagnosing a condition or disease associated with the expression of CC for diagnosing a condition or disease associated with the expression of CC pMAM in a subject, preparing a polyclonal or monoclonal antibody, and CC generating an expression profile of a sample containing the CC expression or overexpression of PMAM are cell proliferation disorders (e.g. epilepsy, CC (e.g. cancer, atherosclerosis), neurological disorders (e.g. epilepsy, CC (e.g. cancer, atherosclerosis), neurological disorders, (e.g. epilepsy, CC allergies), developmental disorders (e.g. hypothyroidism, Cushing's syndrome), gastrointestinal or epithelial disorders, and infections. The EpMAM polypeptides or their fragments are useful in screening compounds that compounds the target polymucleotide and compounds that grecifically bind to, or modulate the activity of the polypeptide. ABU9201-ABU92060 represent the human PMAM polypeptides of the invention of the target polymucleotide in the invention of the

The invention relates to novel diagnostic and therapeutic polynucleotides comply the control of the 2722 sequences defined in the specification. A comply control of the invention may have a use in gene therapy. The human comply control of the condition of the properties may be comply to diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be comply to the condition, disease or disorder associated comply the condition, disease or disorder associated comply the condition of the condition of the condition of the conditions caused by virus, bacteria, fungion parasite. The dithp completes may also be used in genetic mapping, in identifying individuals comply comply as molecular weight markers, and for somatic or germline comply comply conditions. The present sequence represents a dithp protein of the comparition. Note: The sequence represents a dithp protein of the comparition. Note: The sequence comply com

The invention relates to a detection reagent capable of detecting one or composed more single nucleic acid polymorphisms. The invention also relates to concentration whether a trait is linked too one of the human chromosomes or composed methor a trait is linked too one of the human chromosomes or composed information given in the specification, an isolated nucleic acid molecule for detecting at least one SNP given in the specification comprising at least about 12 contiguous nucleotides, gencyping at least one containing the detection reagent. CC individual having or at risk of developing a disorder and a kit comprising at least one containing whether a trait is linked to one of the human chromosomes or its sub-region comprises determining whether the trait is linked to one comprises contacting the detection reagents. Genotyping at least one SNP position given in the specification in a sample comprises contacting the sample with a detection reagent that differentiates between alternative comprises genotyping at least one SNP position given in the specification. CC alleles at at least one SNP position given in the specification in a comprise segmentyping at least one SNP position. CC identifying an individual having or at risk of developing a disorder comprise segmentyping at least one SNP given in the specification in a comprise segment promote the individual. The disorder is type II diabetes consider in the specification reagent is considered at for this patent diabetes or obesity. This sequence considered at for this patent diabetes or obesity. This sequence considered and cc specification but was obtained in electronic format from USPTO at the sequence and cc sequence hatmines and considered in electronic format from USPTO at the considered at the sequence had not form part of the printed at the considered and conside
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US-09-314-777-1
                                                                                                                                                                                                                                 US-09-461-061-17
                                                                                                                                                                                                                                                    RESULT 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-09-314-777-1
Sequence 17, Application US/09461061
Patent NO. 6869931
GENERAL INFORMATION:
APPLICANT: McCrae, Keith R.
TITLE OF INVENTION: Inhibition of Angiogenesis By High Molecular Weight TITLE OF INVENTION: Kininogen Domain 3 Peptide Analogs
FILE REFERENCE: 6056-260 US
CURRENT APPLICATION NUMBER: US/09/461,061
CURRENT FILING DATE: 1999-12-15
EARLIER APPLICATION NUMBER: 60/112,427
EARLIER FILING DATE: 1998-12-16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1, Application US/09314777 Patent No. 6110686

Sequence 425, Application US/09978360A

Publication No. US20060009633A9

GENERAL INFORMATION:

APPLICANT: Edwards, Jean-Baptiste Dumas Milne

APPLICANT: Duclert, Aymeric

APPLICANT: Dobert, Severin

APPLICANT: Clusel, Catherine

FITLE OF INVENTION: Complementary DNA's Encoding Proteins with Signal Peptides

FILE REFERENCE: 56.US4.CIP

CURRENT APPLICATION NUMBER: US/09/978,360A

CURRENT APPLICATION NUMBER: US 60/066,677

PRIOR FILING DATE: 1997-11-13

PRIOR APPLICATION NUMBER: US 60/069,957

PRIOR APPLICATION NUMBER: US 60/069,957
